Summary

I am a Software Engineering student at Mae Fah Luang University with hands-on experience in frontend development and a strong focus on building responsive, user-friendly web applications. Proficient in **JavaScript, React, and React Native, Java(Spring Boot)** with practical experience gained through personal projects and professional work. Seeking an internship opportunity to contribute to real-world applications while continuing to grow as a full-stack developer.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+)

Frontend: HTML5, Tailwind CSS, Bootstrap, React.js (Hooks, Context API, React Router), React Native

Backend: Spring Boot, RESTful APIs, MVC Architecture

Database: MySQL

Tools: Git, GitHub, Postman, VS Code

Concepts: OOP, Agile/Scrum, API Integration, JSON

EDUCATION

Bachelor of Engineering in Software Engineering | GPA: 3.94

Expected May 2027

Mae Fah Luang University, School of Applied Digital Technology

WORK EXPERIENCE

Front-end Developer | Sa Map Organization

Aug 2024 - May 2025

- Developed and maintained responsive web interfaces using React.js and modern CSS frameworks
- Collaborated with backend developers to integrate RESTful APIs
- Improved user experience by optimizing UI performance and responsiveness
- Implemented reusable components to enhance development efficiency
- Participated in team discussions and followed Agile development practices

PROJECTS

Finance Tracker - Personal Finance Management System

- Developed a full-stack application to track income, expenses, budgets, and savings goals
- Built RESTful APIs with Spring Boot and integrated with React frontend using Axios
- Implemented secure authentication using Spring Security and BCrypt
- Deployed frontend and backend on Google Cloud with Docker and CI/CD pipelines

EcoGo – Sustainable Living Mobile Application

- Designed a mobile app to encourage eco-friendly habits using a gamified points and level system
- Implemented features such as habit tracking, leaderboard, campaign participation, and analytics
- Integrated Firebase for real-time database, authentication, and backend services
- Enhanced user engagement through notifications, reminders, and community campaigns

Lumora – Mental Health Tracking & Risk Assessment

- Developed a backend system for mental health monitoring with mood tracking and risk prediction
- Integrated machine learning models to assess depression risk based on user data
- Implemented JWT-based authentication and automated alert system for high-risk users
- Built APIs for data visualization, chatbot integration, and email notifications

ACHIEVEMENT

Winner – SE Hackathon 2025

Mae Fah Luang University

- Led development of a user-focused application using LINE LIFF (LINE Front-end Framework)
- Collaborated in a team environment to design, build, and present a functional solution under time constraints
- Overcame technical challenges and delivered a scalable, user-friendly product
- Recognized for innovation, usability, and overall project impact by judges
