SUMMARY

Final-year Software Engineering student (GPA 3.94) with hands-on experience across the full stack, spanning React, TypeScript, Java, Spring Boot, FastAPI, Python, MySQL, and Firebase. Experienced in building responsive interfaces, integrating REST APIs, implementing authentication, and designing relational and NoSQL data models. Winner of the SE Hackathon 2025. Seeking an internship opportunity to contribute to real-world applications while continuing to grow as a software developer.

SKILLS

Languages	Python, Java, TypeScript, JavaScript, SQL
Frontend	React, React Native, HTML5, Tailwind CSS, Bootstrap
Backend	FastAPI, Spring Boot, Node.js, RESTful API design, Spring Security, JWT Authentication
Database	MySQL, Firebase Realtime Database
Machine Learning	Applied ML model integration for risk-assessment features
Tools	Git, GitHub, Postman, VS Code, Android Studio, Figma

EDUCATION

Bachelor of Engineering in Software Engineering — GPA: 3.94 Expected May 2027
Mae Fah Luang University, School of Applied Digital Technology

WORK EXPERIENCE

Front-End Developer Aug 2024 – May 2025
Sa Map Organization | Yangon, Myanmar

- Developed and maintained responsive web interfaces using React.js and modern CSS frameworks
- Collaborated with UI/UX designers and backend developers to integrate RESTful APIs into production features
- Built a library of reusable React components, streamlining development across multiple pages and following Agile practices

ACHIEVEMENT

Winner – SE Hackathon 2025
Mae Fah Luang University

- Designed and built a user-focused application using the LINE LIFF (LINE Front-end Framework) within a fixed competition timeframe
- Collaborated in a cross-functional team to design, build, and present a functional solution under time constraints
- Delivered a scalable, user-friendly product that won first place among competing teams

PROJECTS

Finance Tracker — Personal Finance Management System | [Live Demo](#)

- Built a full-stack application to manage income, expenses, budgets, and savings goals in a single dashboard
- Architected the system with React, Spring Boot, MySQL, REST APIs, and Spring Security for a scalable, secure design
- Implemented authentication and authorization, resolved API integration issues, and deployed the application to the cloud
- Strengthened skills in full-stack development, cloud deployment, and secure system design

EcoGo — Sustainable Living Mobile Application | [Live Demo](#)

- Built a cross-platform mobile app that encourages sustainable habits through gamification and community engagement
- Implemented habit tracking, a leaderboard, campaign participation, and analytics features using React Native and Firebase
- Resolved asynchronous data-loading and real-time synchronization issues across devices
- Gained experience in mobile development, Firebase integration, and cross-component state management

Lumora — Mental Health Tracking & Depression Risk Assessment | [GitHub](#)

- Built a full-stack application to support early intervention through depression risk assessment
- Developed the frontend, backend APIs, JWT-based authentication, and integrated an ML risk-assessment model using React Native, FastAPI, and a modular API architecture
- Overcame integration challenges connecting the ML model to backend services, deepening skills in backend architecture, API design, and AI-powered application development
